Automated Rodent Control

Welcome to Aurocon – Intelligent and reliable pest control

AuroTrap is a Danish rat and mouse trap (patent pending) that guarantees humane and poison-free pest control. The reliable trap requires only minimal maintenance and automatically notifies you via the app when it needs servicing.

About Aurocon

At Aurocon ApS (Automated Rodent Control), we want to contribute to a more environmentally-friendly solution for pest control without the use of poison. The laws surrounding the use of rodenticides (anticoagulants) are becoming increasingly restrictive. That is why we have developed an automatic, efficient, and intelligent rat trap.

AuroTrap is a Danish-designed rat trap, developed after years of experience in pest control. The design is especially attractive to rats because of the special “passageway design” (patent pending), which attracts these invasive pests.

Our innovative hardware is combined with comprehensive data collection and automatic reporting. This makes AuroTrap attractive both as a preventative measure and as a pest control solution.

AuroTrap is easy to service, minimizes the need for physical inspections, and provides optimal security.

AuroTrap is the obvious choice when you want to:

- Fight pests efficiently in an eco-friendly way with no use of poison
- Avoid secondary poisoning of wildlife that naturally scavenges on dead rats and mice

Please contact Aurocon owner Preben Asp, via telephone at +45 30623553 or email at info@aurocon.dk. He's happy to discuss your options, concerns, or answer any questions you may have about how to protect your business or organization.

Here, you can enjoy a free consultation about how to protect your business or organization against rats and mice. No obligation required!

About AuroTrap

AuroTrap is an efficient rodent trap, which humanely exterminates both rats and mice without the use of poison.

The trap is built into a steel box, which can be free-standing, used with or without grounding anchors, or mounted on a wall. The steel box is weatherproof and locked with a key, so neither humans nor non-target animals will be harmed.

When a rat or mouse enters the trap, a CO₂-cartridge activates a piston. This exterminates the pest using compressed air. Every CO₂-cartridge contains enough compressed air to eliminate around 80 rats or mice.

- Environmentally-friendly pest control, with no use of poison
- Can be used with a preferred lure
- No secondary poisoning of wildlife and pets
- Energy saving; on average, the battery lasts for 24 months
- Automatic data collection and reporting; among other things, this tells you when the trap needs servicing
- English-speaking customer service; we offer free guidance on where to place the trap for optimal efficiency
- Extended guarantee for subscribers with free replacement and return of traps
- Data collection is done using Narrowband network. Which covers better than the existing mobile network.

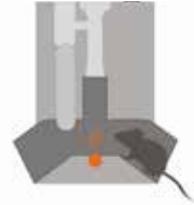

How AuroTrap works

Automatic and environmentally-friendly pest control

1 Pests are lured to the trap

A rat or mouse is lured to the trap with poison-free bait and the specially-designed passageway. This takes into account rodent movement patterns for improved accuracy.

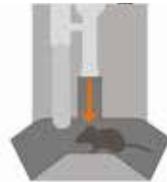

1

2 Humane and secure extermination

The trap's sensors will register when a rodent enters the trap. It will eliminate the pest with a compressed air piston; quick, secure, and humane.

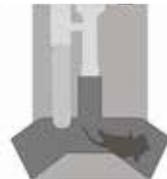

2

3 Data collection

The trap collects a wealth of data, which is automatically transmitted to a server that is accessible from both a computer and smartphone. This data will be assembled, and the server will be notified each time a pest is exterminated.

3

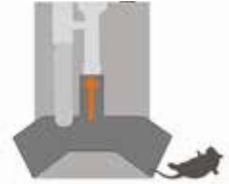

The dead rodents can be collected by wildlife.

4 Automatic resetting

The trap automatically resets itself. Every CO₂-cartridge contains enough compressed air to eliminate roughly 80 rodents.

4

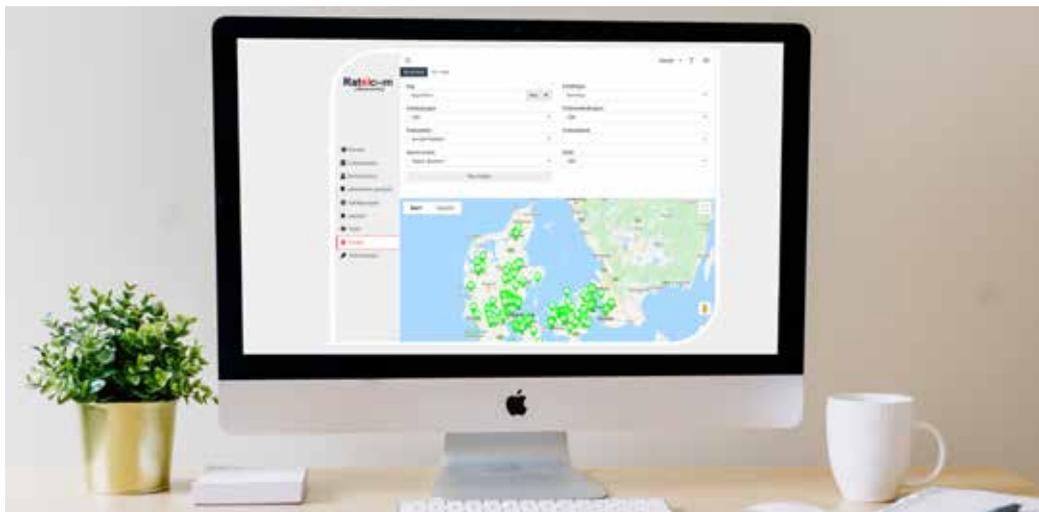

5 Wildlife picks up the exterminated rodents

The rodents are eliminated without risk of secondary poisoning to other animals. The dead rodents can be scavenged by cats, owls, and other natural wildlife.

5

Automatic data collection and reporting

8

AuroTrap automatically collects a large amount of data, which is sent to a server. All data is accessible via smartphone and computer.

The sensors in the trap can distinguish between rats and mice. This gives you a more accurate overview of the pest control situation.

Data that is transferred to the server:

- Trap number
- Trap placement
- Number of rats eliminated
- Number of mice eliminated
- The extermination date of rodents
- The extermination time of rodents
- Battery level
- Compressed air level
- Which direction did the animal come from
- Daytime off funktion
- Activity memory in case of signal interruption

Efficient and reliable solution

- The trap collects a large amount of data that is automatically sent to a server, where it can be accessed via a computer or smartphone. This includes the trap number, trap placement, rats exterminated, mice exterminated, time and date, battery level, compressed air level, and many other data sets.
- The trap, which is free-standing with no power connection needed, can eliminate around 80 rodents before the compressed air cartridge needs replacing. The average battery lifetime is 24 months.

Statement from a customer

9

”

I had a massive problem with pests (mice and rats) on my property.

We chose to try out AuroTrap, which has a non-toxic fight.

Overall, AuroTrap was a success.

Allan Fredsø

“AuroTrap has a multi-kill feature so it remained effective, even after a blow to pests. It can fight up to 80 animals before you need to open the trap. It is much more effective than the known flap traps. Which made it easy for me to maintain.

The app function with history about the status and number of killing animals, gave me the opportunity to document my fight to the necessary authorities.

We have maintained our AuroTrap traps on properties. Now they stand as security

scheme. At the same time, they are ready to start fighting if animals fall into the trap.

All in all, AuroTrap was a success for our pest control.”

10

Intelligent pest control

The trap automatically sends a notification when the CO₂-cartridge or the battery needs replacing.

The trap is a Danish invention, patent pending, developed by Aurocon ApS.

With the environment in mind, Aurocon has further developed traditional pest control methods to be a smarter solution – one that both saves on maintenance and automates pest control without the use of rodenticides.

Poison-free

Accurate overview of the number of pests eliminated

Efficient pest control

Automatic and intelligent monitoring of the individual trap

The individual trap is easily connected to the server via cellphone GPS when mounted. The online system gives instant access to statistics around the clock, where the latest data from the trap is automatically logged.

When a rodent is eliminated by the trap, it automatically sends a notification to the system. That saves you the hassle of unnecessary servicing or maintenance on the individual trap.

Advantages of automatic trap surveillance:

- Daily status of the trap
- Accurate overview of the number of pests eliminated
- Efficient pest control

12

Protect wildlife against secondary poisoning with a poison-free rat trap .Strengthen your green profile with poison-free pest control.

All extermination takes place without danger of secondary poisoning to wildlife. The eliminated rodents can be scavenged by cats, owls, and other predators.

Avoid unnecessary maintenance for individual traps. The trap notifies you when it needs servicing.
